Evening Brief

Date: Sunday July 15, 2018

Weather Summary

...High Risk for Fast Moving Wet/Dry Lightning in Northern/Central NV and Southern ID Monday morning thru Monday Night in NV/Idaho/NW UT...

Moisture will be pushed further east across northern NV and southern ID/NW UT Monday with more widespread lightning. Monday morning thunderstorms may still be ongoing over parts of northern NV into southern ID and far northwest UT, and will shift east over northeast NV, south central and eastern ID into Northern UT and continue developing through the afternoon/evening. These thunderstorms will have some moisture with them, so may be a mix of wet/dry. However, storm motion is expected to be pretty quick, so this will limit the amount of rainfall any one area will see from these storms. Thunderstorms will produce gusty outflow winds and be moving quickly. See **High Risk for Lightning** Monday.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

		/ \
Great Basin	3	Light Initial Attack Activity
National	3	New Fires and Acres: 32 fires for 7520.5 acres; 2 acres large fire growth

Great Basin Fuel Status interactive link (Use Edge, Chrome or Firefox browsers)

Fuels and Fire Behavior advisories have been issued for Nevada and Utah

Fire Potential

Sagebrush live fuel moisture values are still below normal across Utah, and near record lows for a small area of far western Idaho. Elsewhere across the geographic area the sagebrush live fuel moisture values are closer to normal or even above normal for mid-July, but have peaked and are on the downward trend rapidly due to recent hot/dry weather.

Fire danger values continue to drop over southern Nevada, the AZ Strip and southern Utah, with most areas below the 50th percentile. Over the rest of Utah, ERCs have lowered as well, to between the 50th - 80th percentile. Continued higher humidity and scattered wetting rains into next week over the southern and eastern portions of UT/NV and the AZ Strip will minimize any ignitions from growing rapidly.

ERCs are on the rise over western and northern Nevada into Idaho as dry weather continues, with current ERCs in the 50th - 80th percentile. The significant carryover fuels from 2017 and additional critically dry fine fuel crops from the spring rains in western/northern NV into parts of southern ID/western UT are still significantly contributing to fire spread. Sagebrush fuel moisture continues to decrease in these areas with fuel moisture across portions of western/northern Nevada now below critical levels and contributing to fire spread.

Resources:

Aviation within the Great Basin

- o 23 SEATs
- o 9 Type 1 Helicopters / 5 Committed
- o 8 Type 2 Helicopters / 3 Committed
- o 20 Type 3 Helicopters
- o 4 LATs / 2 VLATs

Crews Committed within the Great Basin

- o 14 IHCs Committed / 1 Available
- o 30 T-2 IAs Committed / 5 Available
